FOSTERING LOCAL TALENT AND INNOVATION

At Rainhouse Manufacturing Canada Ltd., we are dedicated to fostering local talent and driving innovation within the manufacturing and STEAM (Science, Technology, Engineering, Arts, and Mathematics) sectors on Vancouver Island. Our commitment is demonstrated through ongoing collaborations with leading educational institutions, including the University of Victoria, Royal Roads University, Camosun College, and the British Columbia Institute of Technology (BCIT). From manufacturing sponsorships to R&D projects and capstone collaborations, we strive to provide practical experiences that equip students for successful careers in STEAM fields.

SUPPORTING THE RAINHOUSE ENGINEERING SHOWCASE

Another way we support innovation and strengthen local manufacturing and STEAM is through our sponsorship of teams competing in the Rainhouse Engineering Showcase—a signature event we proudly founded. Over the years, the showcase has evolved from a small initiative into a celebrated event, attracting increasing numbers of competing teams and public attendees. This event provides students with a unique opportunity to compete locally, allowing friends and family to witness their hard work firsthand—something often missed at international competitions. It also offers a valuable platform for students to network with industry sponsors.

For our sponsors, the showcase is more than an event; it's an opportunity to scout emerging talent and connect with students who could soon drive innovation within their companies. It's a win-win for both students and sponsors, and Rainhouse is proud to be at the heart of it all.
