

SUPPORTING THE BLUE ECONOMY

Rainhouse is not just a manufacturer—we're an active contributor to Vancouver Island's growing blue economy. Through strategic industry partnerships, including collaborations with the Centre for Ocean Applied Sustainable Technologies (COAST) and other marine innovators, we're helping local companies thrive while fostering sustainable economic growth. By supporting local suppliers and investing in advanced manufacturing technologies, we're also enhancing the region's competitiveness on a global scale.

A COMMUNITY CONNECTED BY THE OCEAN

Living on Vancouver Island means being surrounded by the ocean, making the marine industry one of our most prominent and vital sectors. At Rainhouse, we recognize the importance of supporting this community, not just through manufacturing solutions but also by investing in the next generation of marine innovators. We proudly sponsor local student teams, including UVEEC, whose project—an Unmanned Surface Vehicle designed to collect microplastics—demonstrates how technology can make a positive impact on our oceans. By nurturing young talent, we're helping to ensure a sustainable future for our marine environment and economy.

DISCOVER THE RAINHOUSE ADVANTAGE

By investing in local manufacturing, we're not only supporting Vancouver Island's marine industry but also contributing to the region's economic resilience and innovation. By choosing Rainhouse, marine companies not only gain high-quality products but also contribute to local job creation and sustainable economic growth on Vancouver Island. Rainhouse's versatile capabilities, commitment to quality, and comprehensive contract manufacturing solutions make us the ideal partner for marine manufacturers looking to stay ahead.
