

ARCHIPELAGO'S SUCCESS STORY: A MARINE INDUSTRY PARTNERSHIP

A prime example of Rainhouse's contract manufacturing capabilities is our partnership with Archipelago on FishVue Vantage—a cutting-edge monitoring system used by fishers and regulators to support the sustainable management of fisheries around the world. Archipelago launched FishVue Vantage in early 2024, and the response has been phenomenal. They have already shipped over 200 units across North America, Europe, and Australia, with over 50 installations in Alaska alone. This success highlights the demand for reliable, innovative marine monitoring solutions.

As the Original Equipment Manufacturer (OEM) for FishVue Vantage, Rainhouse manages every step of the production process, including:

1. CNC Machining

Ensuring precise, durable components for harsh marine environments.

2. Electronic Manufacturing Services

Supporting Archipelago with both electronics integration and turnkey electronics manufacturing.

3. Procurement, Assembly, and Testing

Delivering a complete, ready-to-use product with uncompromising quality and functionality.

Archipelago's success showcases how Rainhouse's comprehensive manufacturing solutions contribute to the local marine industry's growth and innovation.

"The Rainhouse Manufacturing Canada Ltd. team was very responsive to changes in early production as we matured the design, and the quality of their work has been exceptional to date. It's great to have Logan O'Reilly and the Rainhouse team delivering the equipment that gets us out on the water!"

– Colin Bishop, Archipelago
